Dear Friends,

"One of the greatest gifts we can give to another generation is our experience, our wisdom"
(Desmond Tutu)

Scientific Supercourse: Over the past few months we have been conceptualizing the building of a Library of Alexandria Scientific Supercourse. We are close to making this a reality. Our rationale is simple, the Global Health and Prevention Supercourse has proven to be successful beyond our dreams with 58,000 faculty from 172 countries sharing over 3500 lectures. We have become the primary source of prevention lectures and the lectures and slides have taught over 1 million students last year. With a spirit of Global Health "volunteerism" you, and everyone else involved with the effort have markedly improved education about global health and prevention. That is pretty cool stuff!!

Ismail Serageldin, the Director of the Library of Alexandria, Vint Cerf, the Father of the Internet, Gil Omenn, the former president of the AAAS, plus the team at the Library of Alexandria, and our group have been constructing the architecture and starting the construction of the Library of Alexandria Scientific Supercourse. The concept here is also simple, the Global Health Supercourse is a proof of concept. It is only a matter of scale to develop a similar model but for all of science. Thus instead of 58,000 scientists we network 5 million, and instead of 3500 lectures, we collect over 1 million and begin sharing these among the scientists of the world in an Open Source free library system.

We have been helped in developing this by Eric Marler, M.D., formerly of IBM, and one of the originators of our Global Health Network in the early 1990s. We could not do exactly the same

as the Global Health Supercourse because of the enormity. However, we have build a simple model with the goal to help the scientist/educator to effectively find the lectures and slides that they want. We have developed a system of personalized lecture filtering and finding so that individuals can search to find slides and lectures. In addition the team at the Library of Alexandria are developing an Amazon.com type 5 star personalized lecture filtering system with the same logic as with Amazon. In Amazon it is easy to find the books that you want to read, here we want to find the slides and lectures to which we want to use.

During the past few months we have harvested, and categorized 1.5 million lectures for the Scientific Supercourse. Eric Marler, M.D. formerly from IBM has been a “tiger” in collecting the lectures. Our first filter has been to select lectures that were .edu/.ppt. When we do this, one finds a set of lectures that are highly applicable. For example, do a search on epidemiology and .edu/.ppt. There are for example, 6740 .ppt/edu lectures or epidemiology. We went down one level to diabetes epidemiology where there were 754 PowerPoint lectures and 1350 for cancer epidemiology. He has completed this process for over 660 disciplines of science. The team in the Library of Alexandria are now designing the Amazon model.

My humanity is bound up in yours, for we can only be human together. (Desmond Tutu)

Eric is also doing the same for .gov and .int sites as there are some excellent scientific lectures available. We are also exploring how best to harvest and collect video lectures of science.

To teach is to learn twice (Joseph Joubert)

Come to the BA Supercourse of Science meeting!

On Jan 5 and 6 we will hold a special meeting at the Library of Alexandria. Drs Vint Cerf, Ismail Serageldin, Ismail Serageldin, Ron LaPorte and others will be presenting about the Supercourse. You can contact super1@pitt.edu for further information. We would love to have you attend.

Lecture of the week

Did you know that Supercourse houses not only individual lectures by full courses? If not, it is time for you to visit our new addition to the collection of the Supercourse courses. Doctor Kristin L. Sainani from Stanford donated a full biostatistical course to our library. This course includes lectures on survival analysis, Cox regression, ANOVA, and many others. Please visit this course by visiting

<http://www.pitt.edu/~super1/courses/stat1.htm>

If you are interested in donating your biostatistical lectures to the Supercourse collection, please let us know

Best Regards from Pittsburgh

Ron, Faina, Mita, Eugene, Soni, Francois, Ali, Jesse, Evan, Nicholas, Gil, Ismail, Vint, Fayrouz, Farshad, Arin
